Geochemistry
Petrophysics
Geomechanics
Log Analysis

Interdisciplinary Interpretations

Comprehensive expert review from multiple perspectives with over 50 years of combined experience in the oil and gas industry will maximize the value of all testing results.

Proprietary Methodologies

Take microscopic features to full well-scale. Some techniques used: cuttings depth correction, Raman for organics and matrix, nanoindentation, and rock volumetric-based geomechanics modeling.

Horizontal Wells

With only gamma and drilling data, our techniques provide valuable and accurate lateral heterogeneity data.

GEOTECHNICAL ROCK LAB™

THINK CUTTINGS! >>>

Consult with our experts today to discover how Integrated Drill Cuttings™ can optimize drilling and extraction projects. Your well is unique – your rock testing should be too!
